

Angle Lake 17 Jan 2016 report from Lake Monitors Buff & Diane Chace

Lake level comparison with recent years on this date:

Year	Reading inches	Difference from Average inches
2016	20	+9
2015	12	+1
2014	1	-10
2013	18	+7
2012	4	-7
2011	17	+6
2010	4	-7
Average	11	

Actual measurements are in centimeters for submittal to King County. Here they are converted to whole inches since the US, Liberia and Myanmar have not shifted to metric. Perhaps her Majesty can help us out here?

A research project has been going on in the lake for several months. Researchers from the UW – Tacoma, Environmental Science Dept are doing a sediment chemistry project with a 1 to 2 year lifespan. The effort is to determine the amount and effect from old coal and the Tacoma Asarco plants on the sediments. Our lake is one of four being studied.
