

Water Level comparison for Angle Lake

The following are year-to-year water level comparison data for Angle Lake. The data are relative to the bottom of an established 1 meter gauge. The readings show the variability from year to year on January 26th of each year.

Calendar Year	Level inches
2009	4.5
2008	8.7
2007	18.9
2006	3.3
2005	-9.6
2004	-0.6
2003	-4.4
2002	5.6
2001	-2.3
2000	19.5
1999	31.3

How the reference point was selected is not known. For Angle Lake, the overflow makes a reasonable reference and when the water level flows out the overflow, the reading is about 81 cm on the meter gauge (34 inches above the bottom of the gauge). The lake level spends a reasonable portion of the year below the bottom of the meter gauge. When the water level is below the gauge the distance is measured from the bottom (zero height) with an un-mounted meter stick. The measurements are recorded as negative values.

The overflow is not quite the maximum level for the lake as the water level can get a bit above it since the drain size is small compared to the size of the lake. The outlet drain pipe height is believed to be 264 feet above sea level (the lake's high water level).

The King County website also has information on water level.
